# Weekly report #3

## Status report

| Date | 02-03-2014 |
|------|------------|
| Week | 9 |
| Group | CAPGEMINI_EMR_integration |

## Introduction

We are now at the end of Sprint 2, which will end with the version 0.2 of the application: codename Backfire.

## Progress summary

Our plan for this sprint was to finish the two epics:

- ⚡ **EA-53** - Vi skal lage en dummy Vscan app som kan starte vår app med et eller flere bilder. `RESOLVED`
- ⚡ **EA-52** - GUI skal mockes opp, testes og implementeres `RESOLVED`

We are proud to say that we have completed both epics, and almost all sub-issues.

## Open / closed problems

### Solved problems

- GUI has been designed, tested and implemented
- An overview of the system architecture has been made
- Get in contact with DIPS. We are currently signing a confidentiality agreement before we communicate further.
- We have established connection with The Norwegian Directorate of Health and met with Roald Bergstrøm, whose working with standardisation. We are awaiting more information from him via email.

### Open problems

- Still unsure about how our app will communicate with different types of EHRs
- The architechture is not set.
- Create requirements document for the latest release (v0.2 Backfire)
- Implement "Review and upload" view

## Planned work for next period

Next week marks the start for sprint 3, where the work to develop release 0.4 will commence. This entails getting the app to allow users to process images collected from examinations, as well as
